

# **DocSpot: Seamless Appointment Booking For Health**

This project is developed as a SmartInternz guided internship project.

## **\*\*Objective\*\*:**

To develop a web-based system where users can seamlessly book appointments with doctors based on specialization, availability, and location.

## **\*\*Features\*\*:**

- User authentication for doctors and patients
- Doctor profile management
- Patient can browse doctors and book appointments
- Admin can monitor appointments and user details

## **\*\*Tech Stack\*\*:**

- Frontend: HTML, CSS, Bootstrap
- Backend: Python Flask
- Database: SQLite

## **\*\*ER Diagram Overview\*\*:**

- Tables: Users, Doctors, Appointments
- Relationships: A user can book appointments with doctors.

This application aims to simplify healthcare access by bringing appointment booking online in a user-friendly and efficient manner.
